

Adaptive Web Assignment 3

Anshuman Bora | 12112147437

Prerequisites

Python 2.7 or higher
Java JRE 1.8

Installation

1. From a terminal, navigate to the directory containing 'server.py'. This is the flask server.
2. In this folder you will see that there is a completely extracted instance of solr and a file called app.py which is our main file. The folder structure looks like

Submission Folder

Content-Based-Recommender

templates

index.html

static

style.css

script.js

server.py

solr-7.1.0

requirements.txt

nlTK.txt

runtime.txt

4. 'pip install -r requirements.txt ', to install all dependencies.
5. 'solr-7.1.0/bin/solr stop' from your command line to disable all running instances of solr.
6. 'python server.py' from the command line to start the application.
7. Go to a browser and go to the link localhost:5000.
